

SongBook3 Setlist Planner

The Setlist Planner is a tool to create setlists, pre-assign instruments, optimize setlist order and assignments to minimize instrument swaps, and export both the actual setlist to your SongBook3Setlists.plugindata and export a spreadsheet detailing assignments and instrument changes.

Contents:

~

1 Installation Pg 2
2 Setup Pg 4
3 Browsing/Searching Pg 5
4 Creating Setlists Pg 6
5 Exporting Setlists & Spreadsheets Pg 8

Installation

Windows:

~~I promise I'll get to this. Eventually.~~
I got to it!

1: Install Python 3.12, either from the Windows store or download direct from Python.

2: Open a command prompt (search 'cmd' in the Start Menu) and install odfpy:

```
pip install odfpy
```

3a: If you want to work with copies of your library and setlist plugindata, copy them to the SongBook2_Planner_vXX_X folder, then double click WinPlannerCopies.bat .

3b: If you want to work directly with your live plugindata files, double click WinPlannerLive.bat . If it does not run, right click, open in Text Editor, and edit the filepaths to the correct destination.

Windows will probably ask you to confirm running either one of these files.

The app should open automatically in your default browser. If not, visit http://localhost:8765 or http://127.0.0.1:8765 in your browser.

Debian-Based Linux:

If it doesn't come pre-installed on your Distro, install Python3. After that, you have 2 options:

1a: Install python3-odf through apt (or your package manager of choice), continue to 2.

1b: Create a virtual environment (venv) where Python dependencies won't affect anything system-wide. To do that:

1: Install Python3-all and Python3-all-venv, then create a venv:

```
python3  -m venv /path/to/somewhere/like/Documents/setlists
```

2: Activate the venv:

```
source /path/to/somewhere/like/Documents/setlists/bin/activate
```

3: Install pyodf:

```
pip install odfpy
```

4: Edit one or both launch scripts' line:

```
exec python3
```

To:

```
exec "$DIR/bin/python3"
```

2: Ensure the launch scripts are set to executable. To work with a copy of your plugindata files, copy SongBook3Data.plugindata and SongBook3Setlists.plugindata from your lotro plugindata folder into the folder containing the launch scripts, then run 'DebPlannerCopies.sh'. To work directly with your live plugindata files, edit DebPlannerLive.sh to contain the paths to each plugindata file, then run it instead.

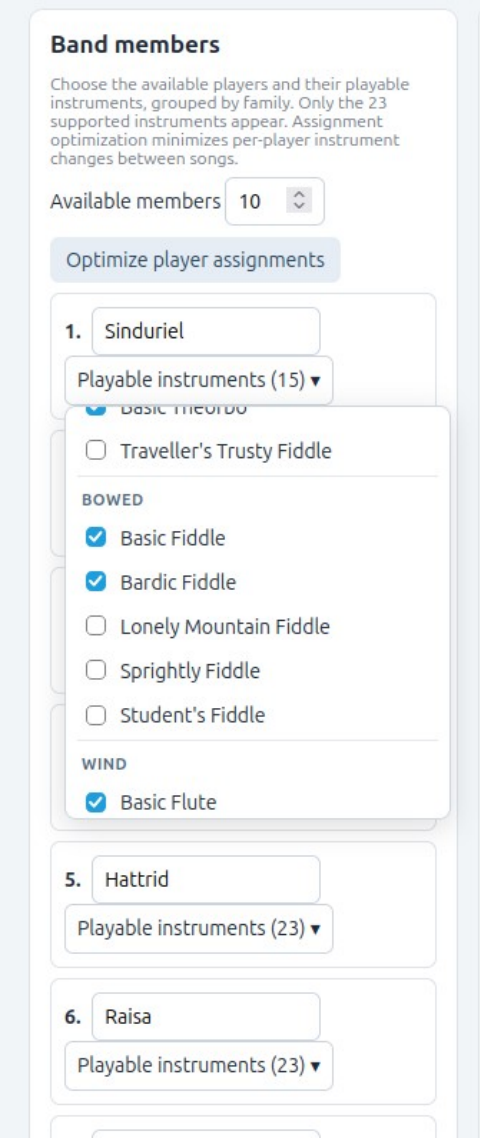

3: Run your chosen script. The app should open in your default browser. If not, visit http://localhost:8765 or http://127.0.0.1:8765 in your browser.

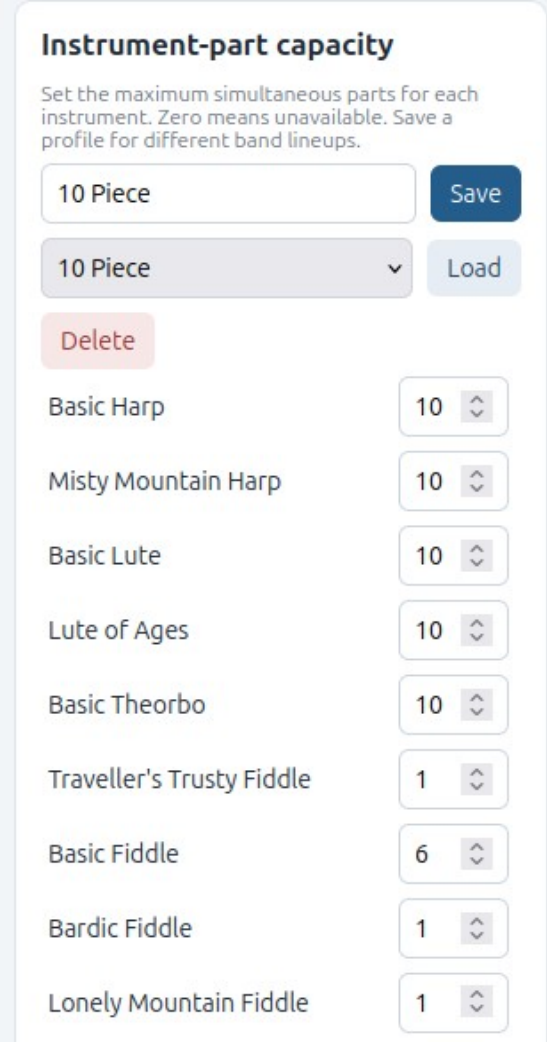

You can also run directly from terminal, with:

```
python3 songbook_planner.py "/path/to/SongBook3Data.plugindata" --setlists "/path/to/SongBook3Setlists.plugindata"
```

Setup

There are a lot of options you can set up. One important setup bit is Band Members. Set the number of members available, and set each player's available instruments. This is especially important if not everyone has the same instruments available. Below that is Part Capacity, where you can set the number of each instrument available to the band. There is a checkbox at the bottom of the list to only show songs playable with this set of instruments/members that will filter out songs that can't be played with that set of instruments. Check it if you only want to see playable songs, leave it unchecked if you are willing to substitute instruments here and there. Band members are saved automatically, Part Capacity can be saved for multiple lineups.

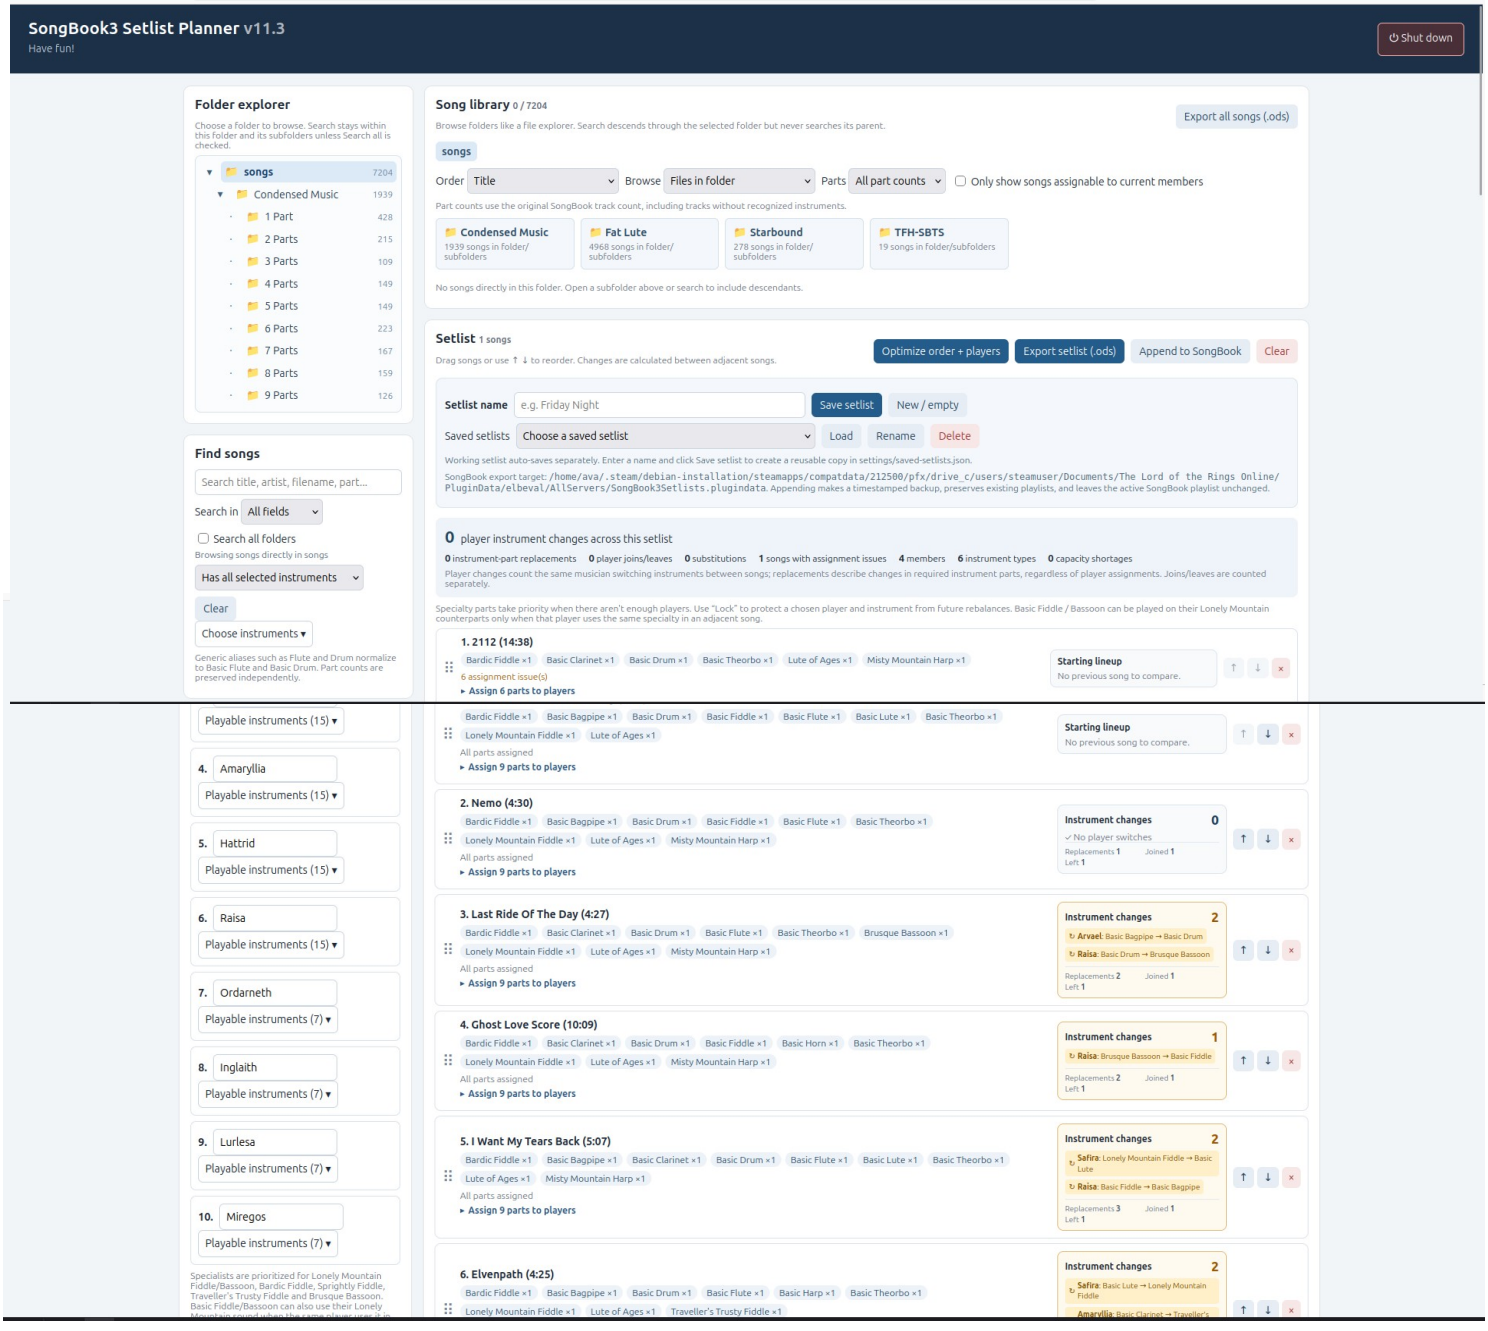

Browsing and Searching

The Song Library and Folder Explorer are used to locate or browse songs, Find Songs is a search utility. In the dropdown ‘Choose Instruments’, you can select what instruments you have available to filter songs by:

Has all Selected Instruments
Has any Selected Instruments
Exclude Selected Instruments
Exact Instrument types

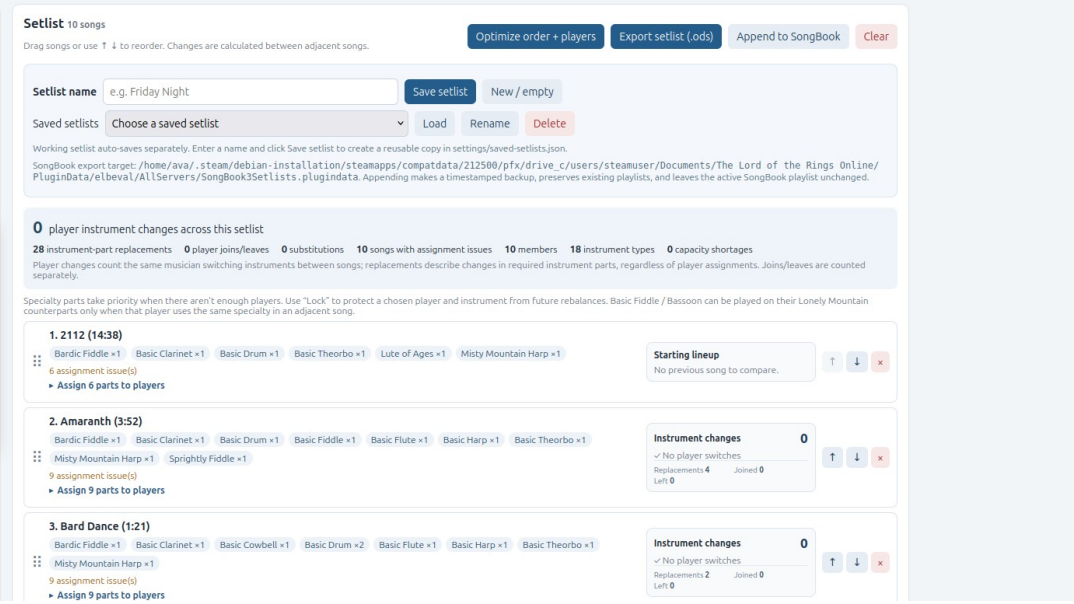

You can change the sort order, browse through folders, filter by part counts, and optionally only show songs that can be played by the band member set you created earlier.

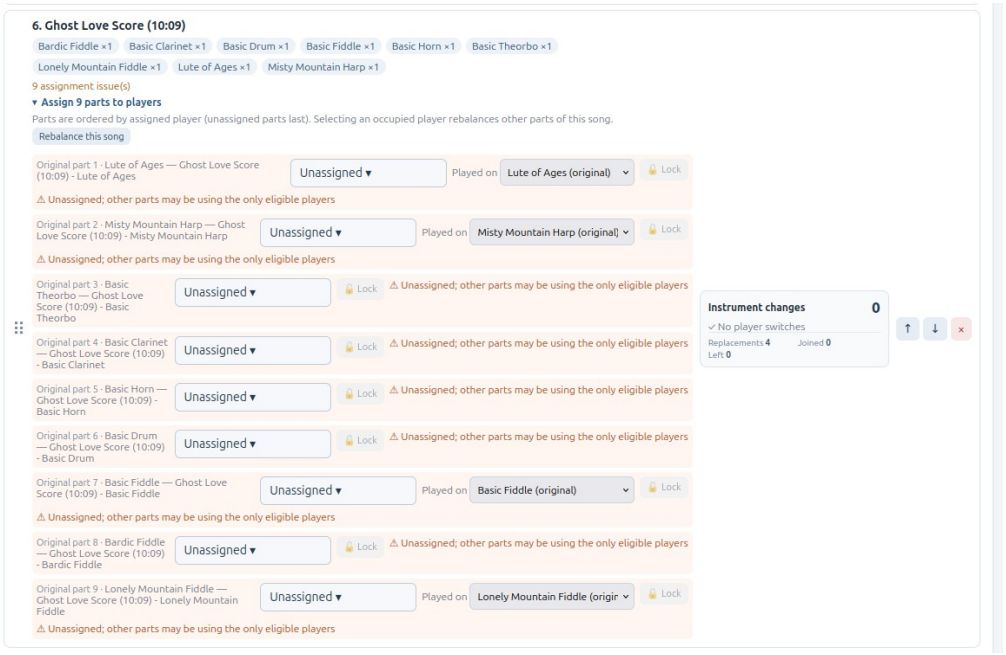

Creating Setlists

To create a setlist, simply click ‘add’ on any song in the browser. If it has any parts that don’t contain a recognized instrument or alias listed in the alias file, it will flag as ‘Unassigned Instruments’, you can click ‘Parts’, where you can change the song’s display title, and assign an instrument to that part. This does not affect the actual abc file, to fix that, you need to edit the actual file, either manually or in Maestro/Limelight/etc.

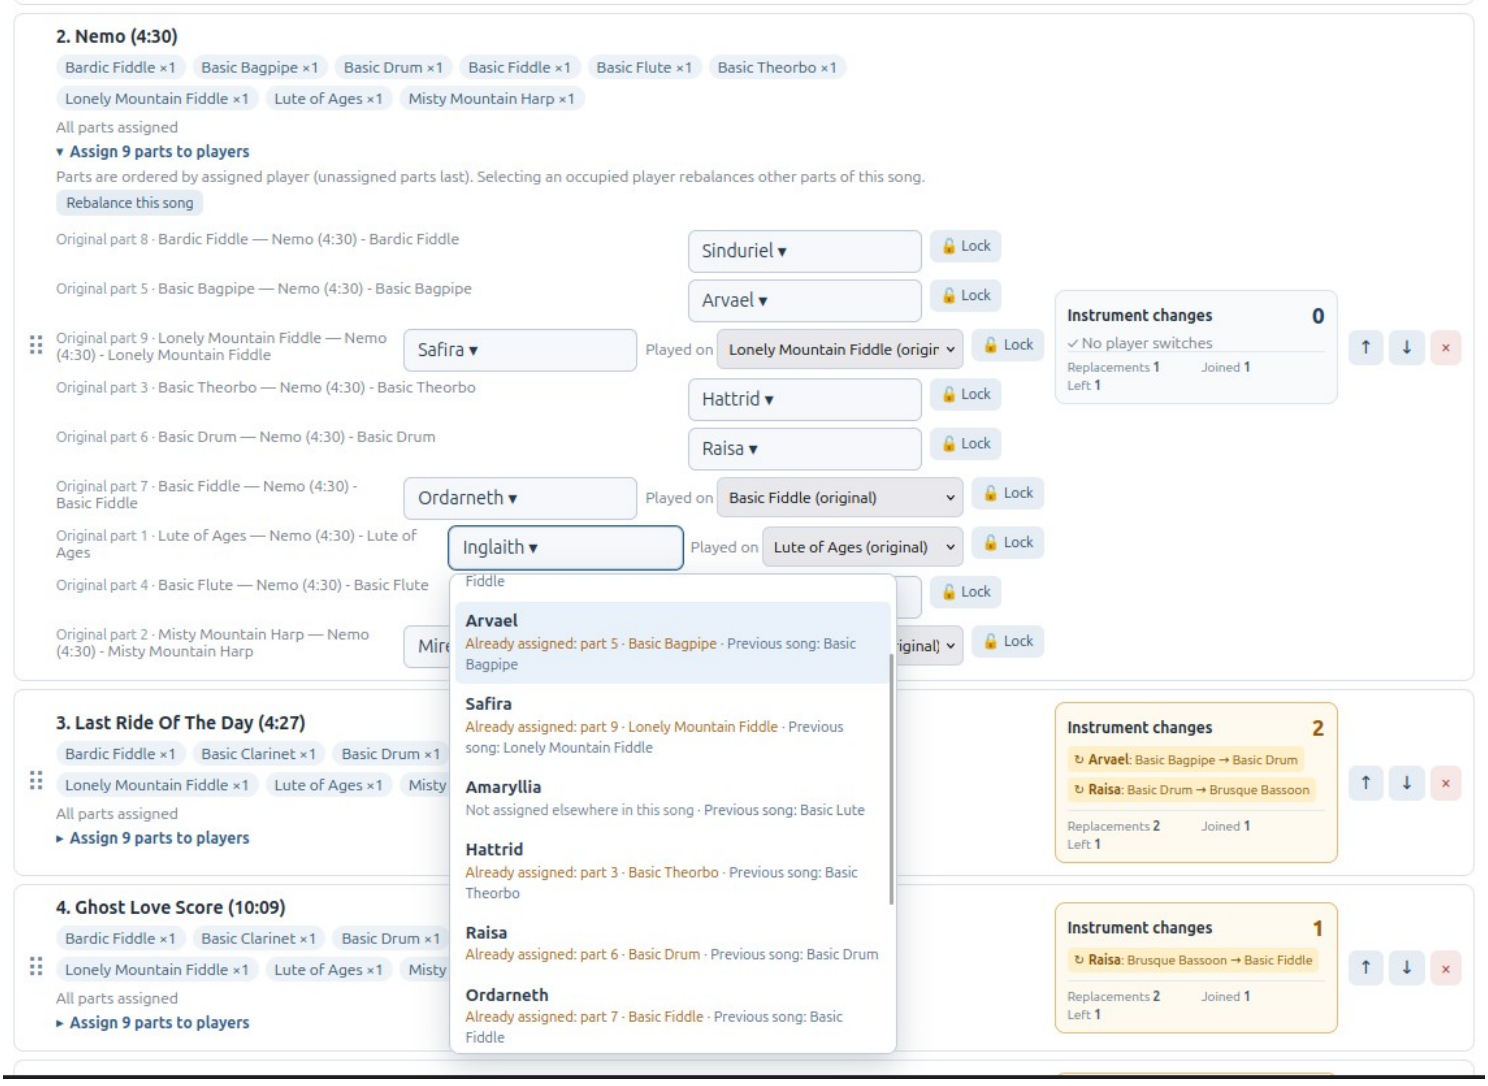

Once you have a setlist, you can either manually assign members to parts, or you can use the ‘Optimize order + Players’ button. Before making assignments, each song will show as many assignment issues as there are parts, since all parts are unassigned:

After assigning parts either with the Optimizer or manually, each song will only display unresolved issues.

Clicking the ‘Assign x parts to players’ button will expand the song to view parts and make/change assignments. When you make asignments, the parts of each song will rearrange themselves in the order they are listed in the members list. If you have more players than parts, the optimizer will switch out members to reduce instrument changes, so the part order you see may not be the exact listing of members.
The dropdown box for each part shows you immediately who is available and unavailable, and why.
Automatic substitutions are made between Basic Fiddle and Lonely Mountain Fiddle; if a LMFidd player uses LMFidd in the previous or next song, and there is a Basic part in this song, it will be substituted in automatically to reduce instrument changes. Same for Bassoon. Substitutions are made automatically between Basic and Lute of Ages when one of them is required but not available, same for MM and Basic Harp. Any part can be reassigned up in the song list. Locking a part ensures that the optimizer cannot change it.

Exporting Setlists

This program is capable of sending the setlist you just made directly to your setlist plugindata file, meaning you don't have to redo the work you just did in-game. Additionally, you can export a spreadsheet showing various things, probably the most important of which is instrument changes through the setlist. This example has both changes and people rotating in and out. Lines are color-alternated for easier reading.

#	Song	Sinduriel	Arvael	Safira	Amaryllia	Hattrid	Raisa	Ordarneth	Inglaith	Lurlesa	Miregos
1	Over The Hills And Far Away (4:42)	▶ Bardic Fiddle	▶ Basic Bagpipe	▶ Lonely Mountain Fiddle	▶ Basic Lute	▶ Basic Theorbo	▶ Basic Drum	▶ Basic Fiddle	▶ Lute of Ages	▶ Basic Flute	—

Player timeline | Setlist | Change log | Legend

Spreadsheets are exported to .ods, which should be readable by any spreadsheet program, and downloaded to your default Downloads folder. The 'Export all songs (.ods)' button creates a (potentially very large!) spreadsheet listing every song in your library, this can take some time with large libraries.
